FOR IMMEDIATE RELEASE

Azure Wireless Named Premium Partner by AirWave Wireless

Leading wireless systems integrator broadens product portfolio with network management solutions that provide full, end-to-end control of wireless local area networks

Rochester Hills, MI – November 8, 2006 – Azure Wireless today announced that it has been named a Premium Partner of AirWave Wireless, the leading developer of network management software solutions that provide administrators a single point of intelligent control to monitor, analyze and configure wireless local area network infrastructures, including those that are heterogeneous, multi-architecture networks comprised of access points from multiple manufacturers.

The AirWave Wireless Management Suite is a fully vendor-agnostic solution that supports new and legacy WiFi hardware from leading vendors, including Aruba, Avaya, Cisco Aironet and Airespace, Colubris, Enterasys, HP ProCurve, Juniper Networks, Proxim, Symbol and others. AMP automatically handles all communication with multi-vendor devices, allowing administrators to monitor and configure diverse networks from the same easy-to-use web console.

“The AirWave Management Platform is a powerful wireless network management tool. As wireless network technology changes and the market consolidates, enterprises looking to expand or enhance their wireless LANs are faced with the difficult choice of replacing their legacy equipment or operating two disparate networks,” said John Anderson, director of sales for Azure Wireless. “AirWave’s software allows these enterprises to upgrade and improve their networks while extending the life of their existing WLAN investment. Studies show that, in two years, nearly half of all organizations with WLANs expect to have heterogeneous, multi-architecture networks. Simplified management of these networks will be critical.”

“We look forward to working with Azure to help its customers gain control of their wireless local area networks,” said Bryan Wargo, Vice President of Sales, AirWave Wireless. “We were drawn to Azure because of its reputation, expertise and experience. Our partnership will help us extend our market leadership and enable Azure to expand the depth of its product offering and help its client base.”

About Azure Wireless

Azure Wireless provides its clients and channel partners with innovative mobile computing and wireless networking solutions that produce productivity increases, efficiency gains and operating expense reductions through untethered connectivity.
