FOR IMMEDIATE RELEASE

Azure Wireless Achieves Certified Partner Status with BridgeWave Communications

Leading wireless systems integrator broadens product portfolio after successful implementation of a Gigabit wireless link between facilities of a Tier One automotive supplier

Rochester Hills, MI – September 11, 2006 – Azure Wireless today announced that it has become a Certified Partner of BridgeWave Communications, an innovative manufacturer of Gigabit and Fast Ethernet millimeter wave wireless link solutions that can be used to establish fiber-speed broadband 1000 Mbps connections between locations up to four miles apart and 100 Mbps links at distances of up to five miles. BridgeWave products can eliminate leased circuit costs, extend LAN backbones to remote buildings, connect buildings to metro fiber sites, or create redundant links for existing fiber connections.

BridgeWave's wireless wide area point-to-point link solutions have been deployed at locations throughout North America, including the University of Michigan and healthcare organization in Michigan.

"BridgeWave's products distinguish themselves in the marketplace. An increasing number of our clients want Gigabit wireless connections, but, until now, there were few products that really made this a viable option. With the ability to provide Gigabit links that can reach up to four miles and BridgeWave's unique weather resilient feature in the AR series for enhanced performance, we can now provide wireless Gigabit links to more of our clients. BridgeWave's new 80 GHz products also allow clients who may prefer the security of a licensed solution with the ability to rapidly implement a link with as little as one day licensing approval process," said John Anderson, director of sales for Azure Wireless.

"We look forward to working with Azure to help its customers gain high capacity broadband connectivity between locations", said James Norton, Director of Sales, Great Lakes Region of BridgeWave Communications. "We were drawn to Azure because of its reputation, expertise and experience of having successfully implemented our product. Our partnership will enable Azure to expand the depth of its product offering, increase our market leadership with unlicensed Gigabit products and introduce BridgeWave's longer range, licensed 80GHz products."

About Azure Wireless

Azure Wireless provides its clients and channel partners with innovative mobile computing and wireless networking solutions that produce productivity increases, efficiency gains and operating expense reductions through untethered connectivity.
