FOR IMMEDIATE RELEASE

Azure Wireless Announces Completion of Wireless Wide Area Network for the University of Detroit Mercy

Broadband wireless links connect three campuses and Internet service provider, eliminate leased circuits and provide capacity for growth.

ROCHESTER HILLS, Michigan – October 9, 2006 – Azure Wireless announced that it has completed the implementation of a broadband wireless wide area network interconnecting the University of Detroit Mercy's three campuses and the University's Internet service provider. The wireless links provide full duplex, DS3 capacity between the four locations, eliminated the University's need for leased circuits and reduced telecom costs significantly.

With its first wireless link connecting the McNichols Road campus to Merit Network's point of presence at Wayne State University, the University realized a 100% return on its investment in less than twelve months from savings from the elimination of leased circuits and eliminated more than \$30,000 in annual leased circuit costs from its operating budget. The University will realize similar savings with the implementation of the other links to its Outer Drive and Riverside campuses.

"Working with Azure, we determined that fixed wireless solutions could address all of our requirements. The broadband wireless network makes excellent business sense for us and provides the University with a learning resource that is often a priority for students," said Edward G. Tracy II, Director of Information Technology Services for UDM.

"Through site surveys and network engineering, we demonstrated how a broadband wireless solution could provide the speed, bandwidth and reliability the students and faculty at UDM needed, while greatly lowering their network costs. An increasing number of enterprises, institutions and organizations are realizing the compelling economic benefits of connecting their locations with wireless and eliminating monthly leased circuit costs," said John Anderson, director of sales for Azure Wireless. "

About Azure Wireless

Azure Wireless provides its clients and channel partners with innovative mobile computing and wireless networking solutions that produce productivity increases, efficiency gains and operating expense reductions through untethered connectivity.
