FOR IMMEDIATE RELEASE

Azure Wireless Announces Completion of Wireless Wide Area Network for the City of Trenton

Network interconnects nine city facilities, eliminates leased circuits and provides broadband connectivity throughout the city

ROCHESTER HILLS, Michigan – November 3, 2008 – Azure Wireless announces that it has completed the implementation of a wide area wireless broadband network for the City of Trenton, Michigan. The network reduces operating costs through the elimination of leased circuits, increases available bandwidth between City facilities and provides a foundation for broadband connectivity throughout the city.

The network provides secure broadband voice and data communications between the City's police, fire, city hall, public services building, waste water treatment plant, library, senior center, recreation facility and fire station 2 and replaces leased circuits that previously provided connectivity between the nine locations.

“The wireless network combines voice and data traffic over one network and supports our new phone system. The new network also provides us with more multiple times more bandwidth than the old leased T1 circuits, and we were able to eliminate those leased circuits and their costs. The new network provides us with a platform for broadband communications for future use throughout the City,” said Bob Cady, City Administrator for the City of Trenton.

“Azure demonstrated extensive knowledge of wireless networks and worked hard to identify alternatives for network design after we realized discovered some challenges with some of our locations. Azure's experience and expertise were critical to the successful completion of the wireless network project,” continued Cady.

“We are pleased to have helped the City of Trenton implement reliable connectivity between its locations, increase the network bandwidth and eliminate leased circuit costs. Enterprises and organizations are increasingly adopting wide area wireless solutions like these to connect locations, increase bandwidth, improve network reliability and reduce operating costs. The City improved its level of service to its residents while permanently eliminating recurring operating costs,” said John Anderson, director of sales for Azure Wireless.

About Azure Wireless

Azure Wireless is an information technology systems integrator that specializes in providing its clients and channel partners with innovative mobile computing, wireless networking and RFID solutions that produce productivity increases, efficiency gains and operating expense reductions through untethered connectivity.
